Business Model Canvas

Key Partners

- ☐ Universities, schools, hospitals, and companies as target deployment environments.
- ☐ Hardware suppliers (Raspberry Pi, cameras, smart locks).
- ☐ Cloud service and database hosting providers.
- ☐ Security and surveillance system companies.
- ☐ Digital transformation and smart solution providers.
- ☐ Faculty of Artificial Intelligence and academic supervisors.

Key Activities

- ☐ Developing AI-based facial recognition system.
- ☐ Implementing liveness detection for anti-spoofing.
- ☐ Designing and developing the web dashboard.
- ☐ Integrating software with hardware components (camera, smart lock, Raspberry Pi).
- ☐ Managing database and access logs.
- ☐ Testing and improving system performance and accuracy.

Value Propositions

- ☐ Enhances security through AI-based facial recognition access control.
- ☐ Provides fast and contactless entry without the need for ID cards or manual checks.
- ☐ Prevents unauthorized access using liveness detection and anti-spoofing techniques.
- ☐ Automates attendance tracking and access logging in real time.
- ☐ Reduces operational effort and human errors in entry management.
- ☐ Offers a scalable and smart solution suitable for various institutions

Customer Relationships

- ☐ Providing continuous technical support and maintenance services.
- ☐ Training users and administrators on system usage.
- ☐ Offering regular system updates and improvements.
- ☐ Monitoring system performance and ensuring reliability.
- ☐ Establishing long-term service and maintenance contracts.

Customer Segments

- ☐ Universities and higher education institutions.
- ☐ Schools and academic organizations.
- ☐ Companies and corporate buildings.
- ☐ Hospitals and healthcare facilities.
- ☐ Government and administrative institutions requiring secure access control.

Key Resources

- ☐ Skilled team including AI, software, and hardware developers.
- ☐ Hardware components such as Raspberry Pi, cameras, and smart locks.
- ☐ AI models for facial recognition and liveness detection.
- ☐ Web application and database system for management and monitoring.
- ☐ Development tools and platforms used in system implementation.

Channels

- ☐ Direct contracts with educational and corporate institutions.
- ☐ Official project website and online platform.
- ☐ Participation in technology exhibitions and competitions.
- ☐ Partnerships with security system companies.
- ☐ Online marketing and digital outreach.

Cost Structure

- ☐ Hardware costs including cameras, Raspberry Pi, and smart lock components.
- ☐ Software development and AI model training costs.
- ☐ Cloud hosting and database services expenses.
- ☐ System maintenance and technical support costs.
- ☐ Tools, equipment, and prototype development costs.

Revenue Streams

- ☐ Selling the system as a complete solution to institutions.
- ☐ Installation and setup fees for hardware and software.
- ☐ Annual or monthly subscription for system usage and dashboard access.
- ☐ Maintenance and technical support contracts.
- ☐ Custom feature development based on client requirements.
